

MINI CHILLER

Smaller and More Useful Units are
Results of Our Experience and New Technology

SAYO mini chillers were designed for laboratories and research labs where the precise operation, volume of units and their efficiency are important, these units can be used even in small apartments with normal control. They could control the temperature accurately in $\pm 0.1^\circ$ and stabilize in less than one minute in load shocks.

Cooling power of mini chillers starts as small as 0.9 Kw and ends at 17.5Kw that make them useful for small places.

- Plug and play
- Suitable for laboratories
- Suitable for small apartments
- Simple to operate
- Friendly installation
- Optimized foot print and low sound levels
- Design for indoor/outdoor installation
- Programmed microprocessor control system
- Factory installed operating and equipment protection control
- Complete factory assembly
